
Thank you for your purchase. In order to program the code 1900G barcode scanners to work with AIMsi v12, users may have to scan the programming command listed below. This code will program the device to correctly parse driver's licenses (DL).

If the scanner was purchased before 01/01/2016 you will also need to purchase the EasyDL 2.0 software created by Honeywell. This can be purchased directly from Tri-Technical System as SKU: 1900EZDL for \$80. Once purchased you will receive a barcode sent to you via email that will need to be scanned by the 1900G. This email will come directly from Honeywell and it will enable the scanner's DL parsing ability. 1900G barcode scanners purchased after 01/01/2016 will have the EasyDL 2.0 pre-installed.

The code below will set the device's 2D DL output to match the AIMsi v12 format.

AIMsi v11

	<p>In order to utilize the new driver's license (DL) parse routine found within AIMsi v12 the following programming must be applied to the scanner.</p> <p>NOTE: if you are using AIMsi v10 do not use this code</p>
